Operational Systems Rescue & Business Enablement — Grudged LLC

Salesforce Consulting Partner · Listed on AppExchange ↗

Las Vegas, NV / (702) 752-9213 / CMoore@grudged.io / chris-moore.dev / github.com/Grudged

For nearly 15 years I've done one job under a dozen different titles: **walk into an operational system, learn how work actually moves, find where it breaks, document the fix, and train the people who run it.** I've run that play across MAPICS and Manhattan WMS, a full Oracle WMS/Mobile migration, and now Salesforce for nonprofits. Through **Grudged LLC** I help mission-driven organizations turn messy systems and stuck data into something their staff actually trust and can operate themselves. A nonprofit's intake pipeline is just a WIP queue wearing a CRM costume — stuck records, bad ownership, unclear handoffs — and clearing that drift is work I've done for two decades. The platform changes; the discipline doesn't.

HOW I HELP — GRUDGED LLC SERVICES

CRM / Salesforce health checks — org audits that surface stuck data, risky ownership & security gaps.

Intake & process mapping — trace how work really moves, then fix the broken handoffs.

Reporting & funder-data confidence — reports/dashboards leaders and funders can rely on.

Migration & ownership cleanup — safe contractor offboarding, record reassignment, data re-homing.

SOPs & staff enablement — teach-to-fish documentation & training so the team owns the system.

Lightweight automation & tooling — Flow, integrations, and custom apps only where they earn their keep.

SELECTED ENGAGEMENTS — NONPROFIT SYSTEMS RESCUE

Salesforce Org Rescue & Intake Audit ★ — Northside Economic Opportunity Network (Minneapolis)

2026

Nonprofit Cloud production org · LMI entrepreneur wealth-building nonprofit · U.S. Bank-sponsored.

- Audited a live production org and surfaced the real problems: 3,200+ application records stuck unconverted and two departing contractors owning the majority of records — a hidden offboarding landmine.
- Designed a **safe contractor-offboarding sequence** (freeze → repoint guest & default owners to a queue → reassign records → deactivate) that cuts access without breaking live intake.
- Reviewed the public intake flow for missing fault handling and guest-user PII exposure; delivered written findings plus click-path talking points so staff can run the fixes themselves.

NPSP Triage & Quick-Win Roadmap — Special Needs Support Center

2026

- Triaged a staff wish-list against a 2,600-contact / 3,900-donation NPSP org, separating native quick wins (reports, thank-you automations, Gmail/EAC) from larger integration projects (Stripe/PayPal, Mailchimp).
- Sandbox-first, no-deploy-without-sign-off approach that respects a small team's risk tolerance and budget.

EXPERIENCE — TWENTY YEARS OF THE SAME PLAY

Light & Wonder (formerly Scientific Games / Bally Technologies)

Picker to software engineer — one continuous tenure across operations, data & engineering · 2012 — Present

Software Engineer

Apr 2023 — Present

- Build and maintain enterprise data pipelines and backend integrations; optimized PL/SQL procedures to cut system latency 30%+.
- Build internal dashboards (Angular) and ETL workflows (SQL, Python) that turn raw operational data into tools teams actually use — the same "make the system legible" instinct I bring to client work.

Sr. Business Analyst / Data Engineer

Jul 2018 — Apr 2023

- Owned data pipelines and reporting on inventory and logistics performance feeding decisions across departments; documented key processes and drove cross-system workflow improvements.

Floor Supervisor — Electromechanical Product Assembly

2016 — 2018

- Co-supervised two production lines and their assembly teams building card shufflers and electronic gaming machines; ran scheduling, QC, and Kaizen throughput improvements — process discipline at volume.

Technical Analyst / Operations Trainer — Oracle WMS Migration

2013 — 2016

The pattern in its purest form: learn the new system first, document it for the business, train everyone on it.

- Troubleshoot **MAPICS** and **Manhattan WMS** issues and served as the bridge to IS for testing and enhancements.
- Learned **Oracle** ahead of the organization and authored the **Oracle WMS / Mobile documentation** for the business through the migration; built the SOPs for picking, receiving, and case-transfer and trained the floor on them.

Warehouse Lead → Migration Oversight

2012 — 2013

- Led pickers across the parts and manufacturing warehouses; after an acquisition, was asked to oversee the ShuffleMaster picker team and their **Great Plains** → **MAPICS/WMS migration** — my first systems migration, on the warehouse floor.

ALSO BUILD — SOFTWARE & PUBLIC-GOOD TOOLS

Mission Control — a 23-view PWA running all my own infrastructure; making complex systems legible. Angular · FastAPI

FirstEmbark — free, no-login career platform matching new grads to real careers and nearby training. FastAPI · O*NET

Open Scholarships — free, ad-free student-aid directory published as open, machine-readable data. FastAPI · CC BY 4.0

Civic Lens — district lookup & local-government transparency tools for Clark County residents. Angular · GeoJSON

TOOLBOX

Salesforce: Nonprofit Cloud & NPSP, Flow (screen & record-triggered), reports & dashboards, Object Manager & data model, sharing/security & guest-user hardening, Data Loader, Experience Cloud, SFDX/CLI.

Enterprise systems & ops: Oracle WMS/Mobile, MAPICS ERP, Manhattan WMS, Great Plains; systems migration, process mapping, SOP authoring, end-user training, Kaizen / continuous improvement, QC.

Software: Python (FastAPI), Angular/TypeScript, JavaScript, SQL & PL/SQL (Oracle, Postgres, SQLite), Power Platform, REST APIs, Git / CI-CD, technical writing & documentation.

EDUCATION & CERTIFICATIONS

A.A.S., Computer & Information Technology — Software Programming — College of Southern Nevada, in progress (33 credits)

Microsoft Office Specialist — Associate (2025)

Management Certification · Kaizen Training

The Complete Oracle SQL Bootcamp — Udemy (2025)

Angular — The Complete Guide — Udemy (2024)

The Complete JavaScript Course — Udemy (2025)

Understanding TypeScript — Udemy (2024)
